Week 2 Day 9 Progress Pack

Name:- Shivam kumar

Group:-C2

Dataset & Pairing

Dataset Overview

- Total images found: 3235
- Input images: 1078
- Target images: 1078
- Generated images: 1078
- Image format: PNG
- Images are organized in different epoch folders.
- Most inspected images have dimensions of 256 × 256 pixels.

Pairing

1. Images are identified using filename:-
   - _input.png
   - _target.png
   - _gen.png
2. Input, target, and generated images can be grouped using their common image number.
3. One image difference was observed between the total count and categorized count (3235 vs 3234), which will be checked during final data preparation.

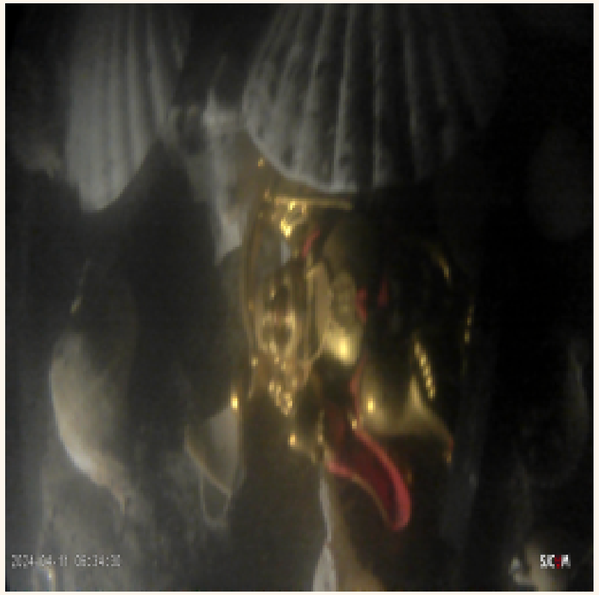

Data Quality – Duplicate Sample

Problem

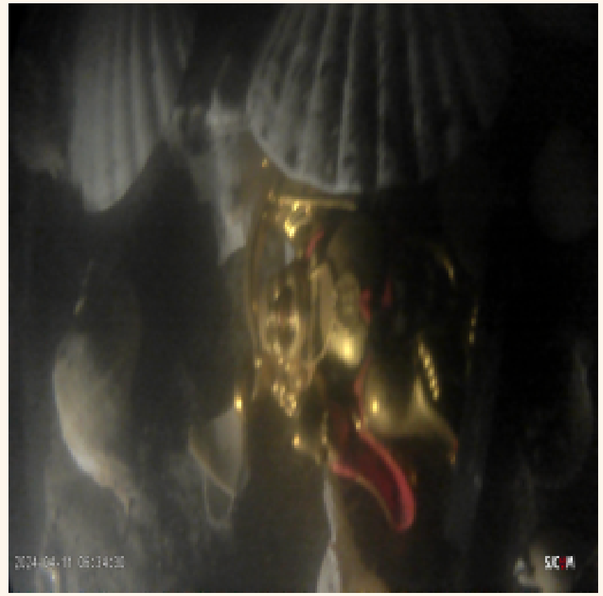

- During dataset inspection, one inconsistent file was found.
- img 74_input - Copy.png
- Location: epoch_0110
- The file does not follow the standard naming convention.
- It was compared with the original img 74_input.png.
- Both images were found to be exact duplicates.

Action Taken

- Duplicate identified.
- It will not be treated as a separate image during final pairing.
- Dataset preparation will include duplicate checking before the train/validation/test split.

Data Preparation

Data Cleaning

- Check for duplicate images.
- Remove/exclude exact duplicate files.
- Check for missing or invalid images.
- Verify image dimensions and file formats.

DATA-PREPARATION PLAN

Raw Dataset

Model Training & Evaluation

Image Pairing

Images will be paired using the common image number.

↓

img74_gen.png

Preprocessing

- Convert images to RGB.
- Resize to 256 × 256 pixels when required.
- Normalize pixel values from 0–255 → 0–1.
- Keep input and target images together during processing.

Thank you
